                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Sequence 3, Application US/09242737
Sequence 3, Application US/09242737
Patent No. 6368809
GENERAL INFORMATION:
GENERAL INFORMATION:
APPLICANT: BERNARDS, REN(
TITLE OF INVENTION: E2F UBIQUITINATION DOMAIN, AND ASSAYS FOR INFIBITORS OF E2F UBIQUITINATION
ZIP: 22201-4714

COMPUTER READABLE FORM:

MEDIUM TYPE: Floppy disk

COMPUTER: IBM PC compatible

COMPUTER: IBM PC compatible

OPERATING SYSTEM: PC-DOS/MS-DOS

SOFTWARE: Patentin Release #1.0, Version #1.25 (BPO)

CURRENT APPLICATION DATA:

APPLICATION NUMBER: US/09/265,566

FILING DATE: 1D-Mar-1999

CLASSIFICATION: <UNKNOWN>

15-NOV-1994
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Query Match

Sequence 1, Application US/08545528D

Patent No. 6537773

GENERAL INFORMATION:

APPLICANT: Fraser et al.

TITLE OF INVENTION: Uncleotide Sequence of the Mycoplasma Genitalium Genome, Fragment

Patent No. 6537773

TITLE OF INVENTION: Thereof, and Uses Thereof

PILE REFERENCE: PB193P1

CURRENT APPLICATION NUMBER: US/08/545,528D

CURRENT FILING DATE: 1995-10-19

PRIOR FILING DATE: 1995-06-07

PRIOR FILING DATE: 1995-06-07

PRIOR FILING DATE: 1995-06-07

US-09-621-976-91/c

Sequence 91, Application US/09621976

Patent No. 6639063

GENERAL INFORMATION:

APPLICANT: Dumas Milne Edwards, J.B.

APPLICANT: Glordano, J.Y.

TITLE OF INVENTION: ESTS and Encoded Human Proteins.

FILE REPRENCE: GENGET.054PR2

CURRENT APPLICATION NUMBER: US/09/621,976

CURRENT FILING DATE: 2000-07-21

NUMBER OF SEQ ID NOS: 19335

SOFTWARE: Patent.pm

SEQ ID NO 91

LENGTH: 570

TYPE: DAM

ORGANISM: Homo sapiens
Hey, Patricia

Sequence 1, Application US/08531927B

Patent No. 5840491

TITLE OF INVENTION:
PATENT INVENTION:
DIABORIES OF SEQUENCE Encoding the Machado-Joseph
TITLE OF INVENTION:
DIABORIES OF SEQUENCES: 23

CORRESPONDENCE ADDRESS:
ADDRESSEE: Hamilton, Brook, Smith & Reynolds, P.C.
STREET: Two Militia Drive
CITY: Lexington
STATE: Massachusetts
CONTRY: USA

CONPUTER READABLE FORM:
MEDIUM TYPE: Floppy disk

Sequence 7, Application US/08261822A,

Patent NO. 5650553;

GENERAL INFORMATION:

APPLICANT: Ecker, Joseph R. et al.

TITLE OF INVENTION: Plant Genes for Sensitivity to Ethylene

TITLE OF INVENTION: and Pathogens

NUMBER OF SEQUENCES: 82

CORRESPONDENCE ADDRESS:

ADDRESSEE: Woodcock, Washburn, Kurtz, Mackiewicz & No. 5650553ris

STREET: One Liberty Place, 46th floor

CITY: Philadelphia
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Gaps
                                                                                                           Sequence 13, Application US/09675305

Patent No. 6441153

General INFORMATION:

APPLICANT: Donoho, Gregory

APPLICANT: Turner, C. Alexander Jr.

APPLICANT: Pandrowicz, Brian

APPLICANT: Sands, Arthur T.

TITLE OF INVENTION: No. 6441153e1 Human Carboxypeptidases and

TITLE OF INVENTION: Polynucleotides Encoding the Same

FILE REFERENCE: LEX-0047-USA

CURRENT FILING DATE: 2000-09-29

PRIOR PAPLICATION NUMBER: US 60/156,685

WINDERS OF THE NOOP OF THE NOOP OF THE NUMBER: US 60/156,685

WINDERS OF THE NOOP OF THE NUMBER: US 60/156,685

Sequence 14, Application US/09043303

Patent No. 6251889

GENERAL INFORMATION:

APPLICANT: SANPEI, Kazujiro

TITLE OF INVENTION: Method for Diagnosing Spinocerebellar Alaxia Type 2 and

TITLE OF INVENTION: Primers Therefor

TITLE OF INVENTION: Primers Therefor

TITLE OF INVENTION: WIMBER: US/09/043,303

CURRENT APPLICATION NUMBER: PCT/JP96/01999

EARLIER APPLICATION NUMBER: PCT/JP96/01999

EARLIER FILING DATE: 1998-05-16

NUMBER OF SEQ ID NOS: 17

SOOFWARE: PatentIn Ver. 2.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ;

Patent No. 5741645
GENERAL INFORMATION:
APPLICANT: Cri, Harry T.
APPLICANT: Chung, Ming-yi
APPLICANT: Cophbi, Huda Y.
TITLE OF INVENTION: Gene Sequence for Spinocerebellar Ataxia
Patent No. 5741645
ITILE OF INVENTION: Type I and Method for Diagnosis
NUMBER OF SEQUENCES: 47
